RE: Third-Party Verification of RoHS-Restricted Substances

Dear Customer-

KYZEN cleaning chemistries do not fall under the scope of EU RoHS2 (Directive 2011/65/EU) or similarly adopted legislation in countries outside the EU. These regulations restrict the use of certain hazardous substances in "electronic devices or accessory products" related to electrical equipment. *KYZEN cleaning chemistries are not classified as electronic devices or accessory products.* Furthermore, KYZEN cleaning chemistries are rinsed clean during precision cleaning processes and are not a component of any final electronic assembly. As such, KYZEN has no legal or regulatory requirement to provide third-party verification of compliance to EU Directive 2011/65/EU or similarly adopted legislation in countries outside the EU. However, KYZEN voluntarily submits products for third-party testing to confirm the absence of RoHS restricted substances using the policy¹ outlined below.

As a courtesy, KYZEN submits initial product samples to a third-party lab² for RoHS testing and makes this report available at no cost to the customer.

KYZEN does not provide repeat third-party testing if no changes to the product formulation have occurred.

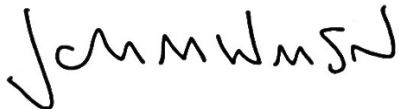

- At the customer's request, KYZEN can issue a response letter certifying that no changes to a specific product formulation have occurred and/or send a product-specific *RoHS Declaration of Conformity*. A *RoHS Declaration of Conformity for all KYZEN products is available for download at www.kyzen.com/compliance;*
- Customer may independently submit a product sample to a third-party lab for testing and reporting at customer's expense, OR
- On the customer's behalf, KYZEN will submit a product sample to a third-party lab for testing and reporting at the customer's expense.

Please contact your KYZEN Representative if we can assist with any of the above options.

Note: Because KYZEN's cleaning chemistries do not fall under the scope of RoHS legislation, EU regulations prohibit the use of the CE logo or similar 'RoHS-compliant' marking on KYZEN product labeling.

Thank you for your interest in KYZEN products.

Sincerely,

John M. Williamson, CSSBB
